

The Art and Science of Cyber Security

Businesses are now using Internet-of-Things technology to increase efficiency and productivity. While businesses constantly strive to provide better service and gain more returns, they must also be wary that cyber criminals are getting more sophisticated and well-organised. Businesses need to ensure that there are sufficient defence in place to protect themselves from cyber attacks that may lead to operational, reputational and financial loss. At this presentation, Foo Siang-tse, Managing Director, Quann, will share insights on cyber security trends and threats, and the key considerations when developing an effective cyber security plan.
