

Embrace The Digital Wave with Your Own Cloud & Data Engine

Abstract

To cater for the challenges of digital transformation, businesses have to turn choices into action. As the changes brought by digital transformation are comprehensive & profound, CIO should shift their role from supporter to innovator. “New IT” technologies like Cloud Computing, Big Data & IoT will be an important drive for their business development & innovation. Thus, new IT strategy based on application-driven architecture should include key features like software-defined, automated deployment & strategy to cater for the emerging application needs in rapid deployment of IT resources and make applications becoming smarter in the era of “Digital Transformation”.
