Redefining Edge Computing

Mr. Anson Shen

Solutions Architecture, Amazon Web Services

Edge computing describes a computing topology in which information processing and content collection and delivery are placed closer to the sources and repositories of this information. In this talk, AWS technologist Anson Shen shares the latest development of AWS and the emerging use cases across different industry sectors in regards to Edge Computing and IoT. With the rise of 5G wireless communication, AWS is broadening the scope of opportunity for customers with varying edge computing needs. What used to run in the “Cloud” is now available at the “Edge”, to empower new possibilities in the next generation of IoT.
